62-10016

Trans. of unidentified German mono. [Stuttgart] n.d.

DESCRIPTORS: *Germanium, Semiconductors, Elec-
trolytes, Electrochemistry, Electrolysis, Electrodes,
Anodes, Impurities

An investigation of the anodic dissolution rate as a
function of the electrode potential, the OH^- concentra-
tion and the doping of germanium showed that the rate-
determining step depends exponentially on the potential
and the reaction order is one with respect to the OH^-
ions and the holes. A reaction mechanism is proposed
that makes more precise the dissolution mechanism
